Herbal Healing

Genesis 1:29 "And God Said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth."

Psalms 104:14 "He causeth the grass to grow for the cattle, and herb for the service of man: that he may bring forth food out of the earth."

In His wise providence, God endowed nature with rich and varied vegetation, which can supply all the elements of nutrition required for the maintenance and recovery of health. The plant kingdom contains many herbs that are conducive to good health. Some assist in cleansing the blood stream and body; others strengthen the immune system; altogether they cleanse and prevent disease, heal and build the body without latent, adverse effects. Chemical remedies, even when used in small quantities and for short periods of time, leave their baleful influence, and if used in large doses or over and extended duration, the serious consequences are chronic illnesses and death.

HELPFUL TIPS:

Before trying herbs read and research them, look for the common denominator in several places, in other words if in 5 of the 7 sources you find the same herb for the same ailment. That herb is a tried and true healing source for that illness.

Try and find a grower to buy directly from them. Such as Pacific Botanicals; or Mountain Rose Herbs. These are sources that have not standardized or radiated their herbs. They are grown or wild crafted, harvested, dried and packaged as naturally as possible. While using whole herbs there is the potential for the Pharmaceutical drugs to no longer be needed, as the body is given the tools to repair, so keep a watchful eye as changes will need to be made with Pharmaceutical drugs.

METHODS OF PREPARATION:

Herbs are often used in the form of teas. In the preparation of teas, twenty grams of fresh herb is used per liter of water. If herb is dried use ten grams per liter of water. (Distilled works best as it is an empty, hungry water that will pull more minerals from the herb.)

*Hot Infusion: For Leaves and Stems -Pour Boiling Water over the herb, steep for fifteen minutes, and strain.

*Cold Infusion: For Leaves and Stems- Steep the herb or root in cold water for several hours, strain and use.

*Decoction: For Root, Bark, Berry, or seed Gently simmer for about thirty minutes in water. Strain and Use.

It should be noted that in all tea preparations of herbs, aluminum vessels should never be used. Glass, stainless steel, or good quality enamelware is preferable. If possible use only pure, soft, or distilled water.

Herbs can be dried, ground to powder and put in capsules.
